As an archaeologist you have finally made the full research on the Island of Perseus. You have a full map leading to the cave where the mighty Hercules was buried. It is believed that it was his last resting place and his corpse was still in possession of the magical ring that possessed the strength of all the men he had killed in battle.

You and three fellow archaeologists who helped with the research fly to the Island and have located the cave. While inside you find the Hercules' skeleton with the ring. You gently remove it and pack it away after a brief celebration. On the way out you decide to push one of the supporting structures with your friends behind you to trap them inside and keep the ring all to yourself. Now the cave is collapsing and you do not have the full map to find your way back to the plane and fly out. The sun is setting down fast and the Island is not friendly at night as all the wildlings come out to play. You need to survive, navigate and if necessary fight through the jungle to get to the plane and escape.

Mood Board

A screenshot of the Awwwards website, a platform for showcasing优秀网页设计作品. The page displays a grid of thumbnail images representing different award categories like Websites, Awards, Web & Interactive, Tag, Color, and Country. One thumbnail features a dark-themed design with the text 'WE LIVE BEHIND YOUR SCREEN'.

A screenshot of the Jordansowers.com website, which appears to be a personal or professional portfolio. The main page features a large, minimalist photograph of a room with three white, teardrop-shaped pendant lights hanging from a black rectangular fixture. The website has a clean, modern aesthetic with a white background and a navigation bar at the top.

Colour Scheme

Black is associated with power, elegance, formality, death, evil, and mystery. and also gives the feeling of perspective and depth. Black contrasts well with bright colors. black gives a very aggressive color scheme(Empowered By Color, 2017).

Grey is controlled. It has a steady effect on other colors with which it comes into contact, toning down the stronger and brighter colors and illuminating the softer colours(Empowered By Color, 2017).

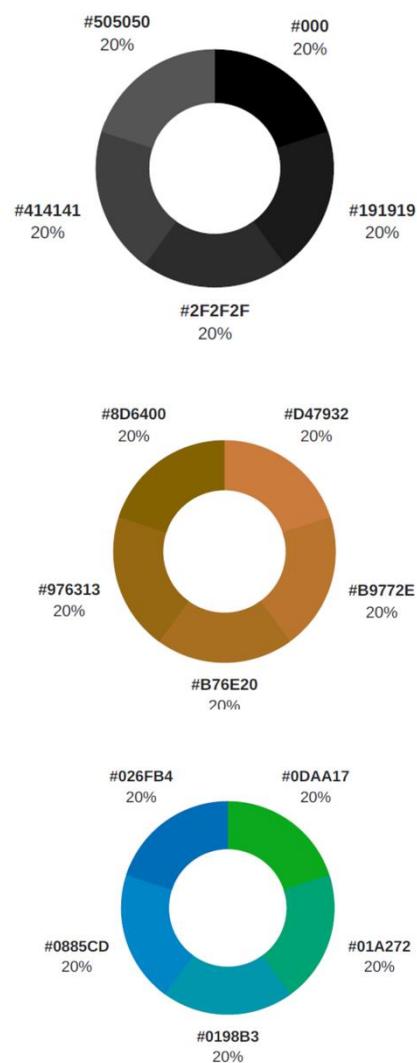

Brown suppresses the emotions, creating a safe haven from the stresses of the outside world within which problems can be contemplated and solved(Empowered By Color, 2017).

Brown is a colour of structure, although by no means does it encourage perfectionism - rather it encourages orderliness and organization(Empowered By Color, 2017).

Green is the color of prosperity and abundance, of finance and material wealth. It relates to the business world, to real estate and property. Prosperity gives a feeling of safety to green(Empowered By Color, 2017).

On the negative, the color green can be possessive and materialistic, with a need to own people and things(Empowered By Color, 2017).

Blue is inflexible and when faced with a new or different idea, it considers it, analyzes it, thinks it over slowly and then tries to make it fit its own acceptable version of reality(Empowered By Color,

A photograph of a forest scene. In the foreground, there is a patch of green grass and some fallen branches. Behind it, several tall, thin trees with dark bark stand vertically. Some of these trees have bright red or orange peeling bark. The background is filled with more trees and dense green foliage.

Background Ideas Trends & Interactivity

For the background we will also add some small animations on the edges of the screen to not make the webpage static and more interactive. Icons will be small animation with a few movements to show life. Some icons will be static but do come alive or they zoom in when the mouse is over them. An example is the cow icon/animation on the following black negative website.

We also want to incorporate our game graphics in the website by having a video background with snippets of the cut scenes playing. They will interchange with static pictures when a user hovers on the website links

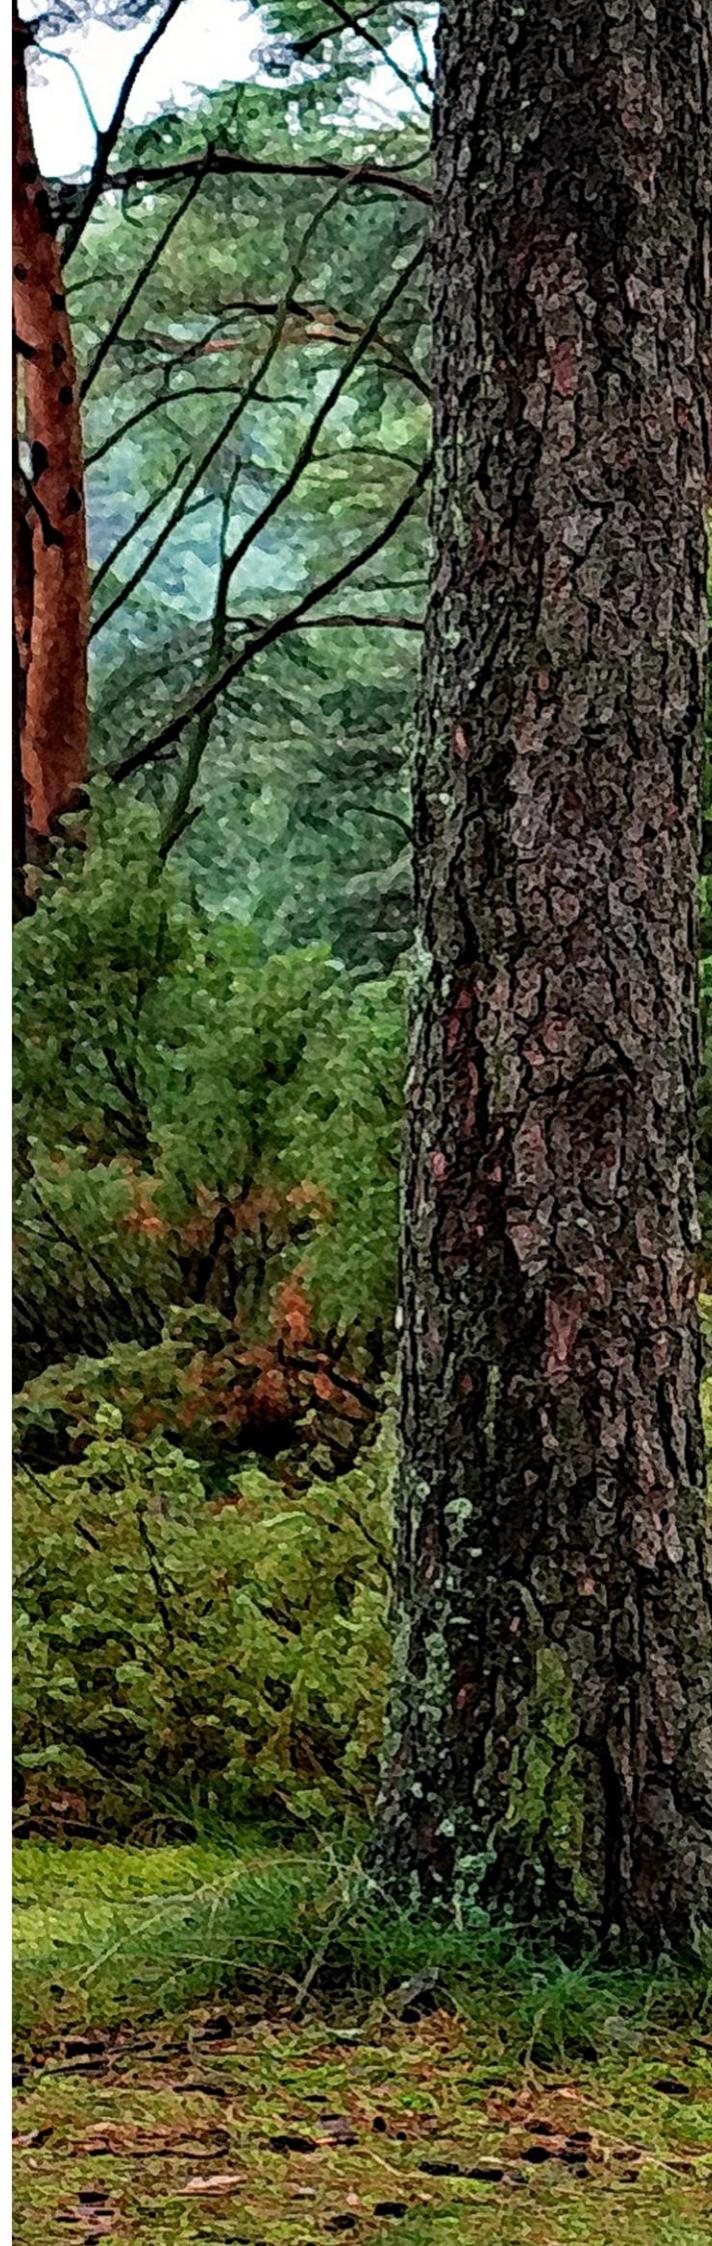

For the website to move from one page to the other you can either simply click on the navigation bar or you can scroll down one page and when you reach the bottom another page will appear from a different direction to indicate that it is now a new page for example as you scroll it will scroll from left to right. The background will also change by fading into the screen. If you keep scrolling different pages will come from different directions.

For images on the website they are going to have an overlay to obscure them a little bit so that they are unclear. A few texts will be appearing and when you hover over the image it will become more defined, clearer and it zooms in slowly. Text will also show over the images with links and headings.

Other design elements will be animating some of the web element themselves such as when the contact form appears rather than having it fade in the transitions within the different pages we could rotate it.
